We put fashion in electronics

Components Design

Presented by: UID, Industrial
Designer

Method

- Standard chip for remote control
- Case study for wheel sensor
- Case study for standard BP

Real Reaction

Findings

- Standard TA11835 element for RC coding
- Use of off the shelf PCP buttons
- Use of standard wheel sensor (price)

Interface Concept

Presented by: User Interface
Designer

Method

- I select materials and designs that fit comfortably and non-intrusively in a remote control
- We want a design that is as simple as possible, but not simpler. It must be robust.

Findings

RR

Real Reaction

Personal Preferences

- We must design something similar to these two, but without the extra buttons. We replace the channel up down button with a wheel. The wheel can be pushed down for channel recall(?)
- A plastic opening for the channel numbers is unnecessary and cubersome. It is also prone to breakage. It suffices for digits to be well separated from the rest of the buttons.

Trend Watching

Presented by: Marketing Expert

Trends

- Recent investigation of the remote control market shows the following:
 - The most important aspect for remote controls happens to be a fancy look-and-feel, instead of the current functional look-and-feel. This aspect is twice as important as the second aspect.
 - The second most important aspect is that a remote control should be technological innovative. In turn, this aspect is twice as important as the next aspect.
 - The third most important aspect is that the remote control should be easy-to-use.

Trends

- Fashion watchers in Paris and Milan have detected the following trends:
 - This year, *fruit & vegetables* will be the most important theme for cloths, shoes, and furniture.
 - Also in contrast to last year, the feel of material is expected to be *spongy*.

Trends

- Recent investigation of the remote control market shows the following:
 - The most important aspect for remote controls happens to be a fancy look-and-feel, instead of the current functional look-and-feel. This aspect is twice as important as the second aspect.
 - The second most important aspect is that a remote control should be technological innovative. In turn, this aspect is twice as important as the next aspect.
 - The third most important aspect is that the remote control should be easy-to-use.

Real Reaction

Conclusion

- Choose a fruit or a vegetable to design the remote control?
- What material can we use to make the remote control spongy?

Presentations

ID

- Conceptual specification of components, properties and materials

UID

- Conceptual specification of user interface

ME

- Trend watching

Decisions

- Components concept?
 - Energy?
 - Chip on print
 - Case
- User interface concept?
 - Interface
 - Type
 - Supplements

Closing

- Next meeting starts in 30 minutes
- Individual actions
 - ID: the look-and-feel design
 - UID: the user-interface design
 - ME: product evaluation
- **ID and UID work together on prototype using modeling clay**
- Specific instructions will be sent to you by your personal coach.
